SPECIFICATION FOR INDIAN HESSIAN

PART II 305 AND 229 g/m² AT 16 PERCENT CONTRACT REGAIN

(First Revision)

0. FOREWORD

0.1 This Indian Standard (Part II) (First Revision) was adopted by the Indian Standards Institution on 16 June 1971, after the draft finalized by the Jute and Jute Products Sectional Committee had been approved by the Textile Division Council.

0.2 Other requirements regarding terminology, general requirements, packaging and marking, sampling and inspection, criteria for conformity of Indian hessian packed in bales or rolls will be according to Part I, of this standard.

0.3 All quantities and dimensions in this standard have been expressed in the metric system. However, corresponding values in fps system have also been given wherever necessary as a guidance to the manufacturers and the consumers.

0.4 For the purpose of deciding whether a particular requirement of this standard is complied with, the final value, observed or calculated, expressing the result of a test, shall be rounded off in accordance with IS : 2-1960*. The number of significant places retained in the rounded off value should be the same as that of the specified value in this standard.

1. SCOPE

1.1 This standard prescribes constructional details and other particulars of the following two types of hessian of such widths as agreed to between the buyer and the seller:

Type I — 305 g/m²; 47 × 47 (or 10 oz/40 in; 11 × 12)
Type II—229 g/m²; 38 × 35 (or 7½ oz/40 in; 9 × 9)

2. SPECIFIC REQUIREMENTS

2.1 The hessian shall conform to the requirements laid down in Table 1.
2.2 The packed bales or rolls shall conform to the provisions laid down in Table 2.
2.3 Contract Regain — The contract moisture regain shall be 16 percent.

*Rules for rounding off numerical values (revised).

<tr>
<td>iv)</td>
<td>Corrected net weight of a bale or roll (see Note 2)</td>
<td>Not less than contract weight</td>
<td>B-1</td>
</tr>
<tr>
<td>v)</td>
<td>Length of hessian per bale (see Note 3)</td>
<td>1 829 m, Min 1 829 m, Min (or 2 000 yd)</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>1 829 m, Min 1 829 m, Min (or 2 000 yd)</td>
<td></td>
</tr>
<tr>
<td>vi)</td>
<td>Length of hessian per roll</td>
<td>As specified in an agreement between the buyer and the seller</td>
<td></td>
</tr>
<tr>
<td>vii)</td>
<td>Permissible number of medium cuts and short pieces per bale</td>
<td>3 medium cuts, 3 medium cuts, Max, or Max, or 2 medium cuts 2 medium cuts 1 short and 1 short piece, Max piece, Max</td>
<td>B-3</td>
</tr>
<tr>
<td>viii)</td>
<td>Number of joints in a roll(s) and number of such joined rolls in a consignment (see Note 4)</td>
<td>As agreed to between the buyer and the seller</td>
<td></td>
</tr>
<tr>
<td>ix)</td>
<td>Oil content on dry deoiled material basis (see Note 5)</td>
<td>6 percent, Max 6 percent, Max</td>
<td>B-9</td>
</tr>
</tbody>
</table>

**Note 1** — Contract weight of a bale or roll is calculated as follows:

\[
\text{Contract weight of a bale or roll in kg} = \frac{\text{nominal width (cm)}}{100} \times \frac{\text{marked length (m)}}{1 000} \times \frac{\text{weight (g/m}^2\text{)}}{1 000}
\]

Contract weight of a bale given in the table is on the basis of 102 cm nominal width and marked length of 1 829 m per bale.

**Note 2** — Corrected net weight of a bale or roll is calculated as follows:

\[
\text{Corrected net weight of a bale or roll} = \frac{\text{net weight} \times (100 + \text{contract regain percent})}{100 + \text{average moisture regain percent}}
\]

**Note 3** — Length of hessian per bale shall be 1 829 m or as specified in an agreement between the buyer and the seller.

**Note 4** — The seller shall indicate on the roll(s) the number of joints, if any.

**Note 5** — The specified oil content value of 6 percent corresponds to an oil content of about 5 percent when determined on dry deoiled material plus 16 percent regain.

* Specification for Indian hessian, Part I General.
